Invitation

Invitation

Andrew and Jules are very pleased to extend an invitation to you to attend our 8th annual Benelkay Poll Santa Gertrudis Bull Sale on Tuesday the 20th of August, 2019 at 1.00pm on property "Glenmore" Mullaley. This is the first day of Ag Quip so please take note of that and book accommodation early please.

Well, where do I start, I remember last year quoting that 2018 was one of the driest years the area has experienced in over one hundred years. Well as it turned out it was the driest year in recorded history and unfortunately 2019 as I write this, has not delivered the break in the season that we had all hoped for. As breeders, be reassured keeping our breeding herds intact and looking for continued genetic improvement will pay dividends into the future. As hard as this is financially to achieve, I feel there is still a bright future in the beef industry for those of us that can pull through these trying times.

We are very excited to present to you our line-up of all Poll Santa Gertrudis bulls, responding to clients who, for a range of reasons need to be able to purchase poll bulls to suit their operations. I feel very confident with the overall quality and evenness of the sale team. We are very proud to offer this year's group of sale bulls and feel they are of the highest quality we have offered, mostly due to the high standard of our own sire battery that we are using over our 400 stud cows.

We are able to offer a range of types of bulls to suit different market requirements and realize not all bull buyers are looking for exactly the same type of bull for their operation. The Orman family have made considerable investments in poll sires in the past forty years to produce seed stock bulls to suit both the commercial and stud sectors. We have started using our own Homozygous Sires to increase this trait within our own female stud herd, with very pleasing results.

All bulls will have BreedPlan figures to assist you in the selection of the sire to suit your breeding objectives. As well as raw data figures for weight, DWG, scans for EMA and Fats. All bulls are semen and vet tested by Mark Baker, Gunnedah Saleyards Veterinary Clinic. Our aim is to provide paddock reared fit and healthy bulls, so cattlemen can be confident in their bull purchases. You can view pictures of the sale draft at www.benelkaysantas.com.au, or contact Andrew 0427 435 201 directly for more information or to arrange inspections presale if you feel that it will assist you. Looking forward to catching up with you all on sale day.

Kind Regards

Andrew Orman and Family

Sale Information

Health - Vaccinations

7 in 1, Vibro, AD&E and Multimin Vaccinations have been done on the 02.03.2019 and 27.06.2019. All sale bulls have received two shot this year and should receive a booster to fall into your own breeding program.

Benelkay stud is located in a Bovine Johne's disease protected clean area. There have never been any traces of this disease detected at our stud's properties. We have completed a Grazing Manual Biosecurity Template, version 1.1 before the 30/06/2017. There has been veterinary oversight into the development of our biosecurity plan, as we aim to remain a J-BAS 6 score.

Treatments

All bulls have been treated on the 02.03.2019 with Ivomec pour and on 27.06.2019 with Verbamec pour on.

Feeding

The Sale Bulls have been running together in one mob on drought affected native pasture since, weaning. From then on they have been running in an old lucerne paddock with access to self feeders, with a mixture of sorghum / wheat stubble hay, Palm Kernal and 20% cracked wheat mixed together with a Keenan mixer. The bull's preparation this year has been different than other years due to the drought and we will go back to our normal preparation in the coming years. Only the good bulls with strong constitutions prevailed.

Handling

All bulls are handled with four wheel motorbikes and dogs. Our bulls have had little experience with horses.

Semen Testing

All bulls have been evaluated for breeding soundness and semen tested by Mark Baker, BVSc & Associates of Gunnedah Saleyards Veterinary Clinic. Testing was done over two days 01.07.2019 and 02.07.2019. We have only semen tested not morphology tested as well this year as a cost cutting measure due to the drought. **All bulls are fully guaranteed to be fertile.**

Scanning

All bulls have been scanned for EMA, Fat (Rib, Rump, IMF%) and Scrotal Size Measurements, by Bovine Scanning Services (Lonnie Stone). This will be carried out in mid August 2019. The raw data will be available a few days before our sale day and on our web site as well as on sale day.

Inspections

Inspections are welcomed anytime. Bulls will be yarded by 9.00am on Sale day. Pre-sale day inspections can be arranged by contacting Andrew Orman on 0427 435 201 or 02 6743 5201, or Elders Gunnedah. Supplementary sheets containing all relevant bull information will be available a few days prior to the sale and on sale day. If you would like a copy emailed to you please contact Andrew or visit our website or Facebook page to download a copy, a few days prior to sale day.

Insurance

We have arranged for company insurance representatives (Elders and WFI) to attend the sale and we highly recommend that buyers insure their purchases from the fall of the hammer.

Rebate

The vendors offer to pay a 2% rebate to outside agents who introduce their clients in writing to them 24 hours prior to the sale and settle in full on their behalf within 7 days of the sale.

AuctionsPlus

The sale will be interfaced with auctions plus, for clients that cannot attend on sale day, please organize with your agent prior to sale day.

Phone bidding can be organised through Elders Gunnedah, (contact Nick Hannaford 0417 201460 or Brian Kennedy Elders Stud Stock 0427 844 047, there is good mobile phone reception at the bull sale venue.

Air Strip

An all-weather air strip is available 5km from sale venue, to use this please contact Andrew Orman.

Accommodation We recommend

Gunnedah:

Maynstay Motel
380 Conadilly St (02) 6742 7150

McKellar Motel:
342 Conadilly St (02) 6742 6838

Boggabri

Vault Accommodation
135 Merton St (02) 6743 4400

Narrabri:

Bellview Motel Narrabri:
Cnr Newell Hwy & 132 Barwan St.... (02) 6792 3844

Crossroads Hotel Narrabri:
168-170 Maitland St..... (02) 679 25592

Coonabarabran:

Acacia Motor Lodge:
10 John Street..... (02) 6842 1922

Delivery

Please fill out all details in the delivery slip at the back of this catalogue, and organise with Elders post sale before you leave, to aid in the delivery of your bulls. Delivery can be on sale day. If you wish to have another delivery date please contact Andrew Orman or Elders Gunnedah team. The vendors will provide all care with your purchases but will not be responsible after the fall of the hammer for any injury to bulls.

Transport

Local carriers have been contacted and will be present on sale day. Please look for advertising within this catalogue.

Breeding Guarantee

We have taken a lot of time and effort to ensure we are presenting fertile bulls for sale that are structurally sound to the best of our knowledge, we want good results from your investment, as do you. If you have any issues with your purchase please contact us, we are willing to work together for a resolution acceptable to both parties for any reasonable claim that is made in a reasonable time frame.

Catering / Refreshments

The local CWA girls will be catering on the day with proceeds to the Goolhi Community.

Risk & Responsibility

Any person attending the sale, do so at their own risk. The vendors assume no liability, legal or otherwise for any injury, accident, loss or damage to any person or property.

Disclaimer

The vendors and agents have produced this catalogue with accurate information, however will not be responsible for any errors or omissions.

GST

Prices for lots sold will be GST exclusive at the fall of the hammer and 10% will be added at time of invoicing.

Directions

Directions to Benelkay Poll Bull Sale, at “Glenmore”, Mullaley,

With navigators use Keechs Rd Goolhi as a reference point, with google use Benelkay Santa Gertrudis Stud.

From Gunnedah.

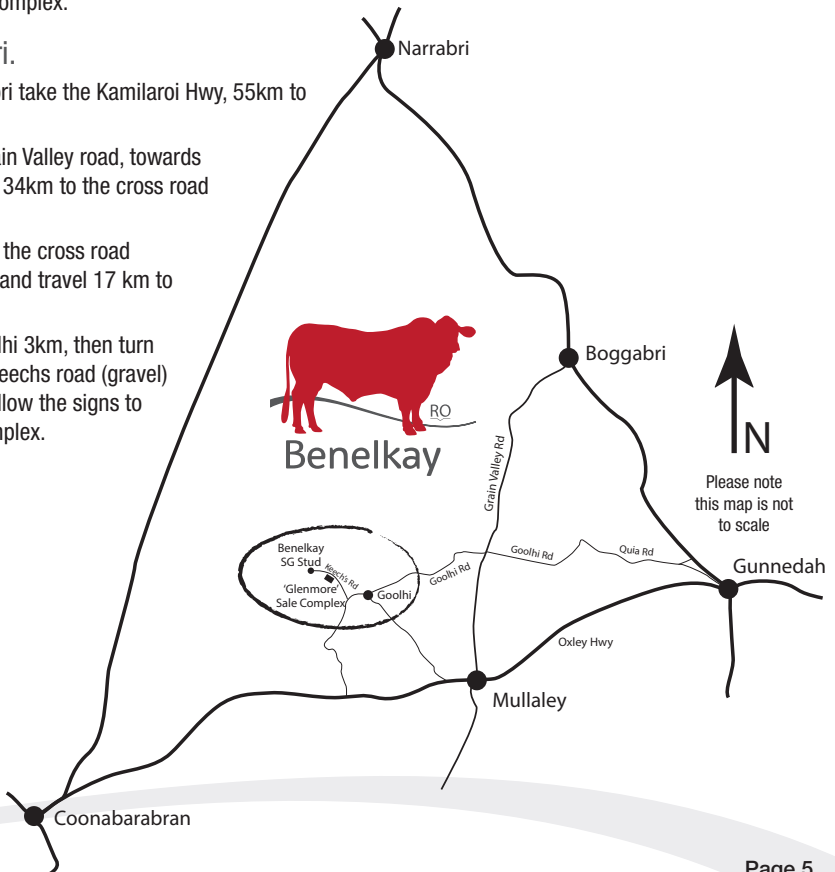

- From Gunnedah take the Oxley Hwy, 34 km's to Mullaley.
- Pass through Mullaley on the Oxley Hwy and travel 5km's towards Coonabarabran, then turn right onto the Booloola road, to Goolhi.
- 15km to Goolhi, turn Left and go 3 km, then turn Right onto Keechs road.
- 6.5km on Keechs road, (gravel) and follow signs to the sale complex.

From Coonabarabran.

- Take the Oxley Hwy 54km towards Mullaley; turn Left off the Hwy to Goolhi.
- 10km down the gravel road, turn Left, as you come onto the tar, onto Keechs road (gravel).
- Go 6.5km on Keechs road; follow the signs to the sale complex

From Narrabri.

- From Narrabri take the Kamilaroi Hwy, 55km to Boggabri.
- Take the Grain Valley road, towards Mullaley, for 34km to the cross road intersection.
- Turn right at the cross road intersection and travel 17 km to Goolhi.
- Go past Goolhi 3km, then turn Right onto Keechs road (gravel) go 6.5km follow the signs to the sale complex.

The EBVs contained within this catalogue can be validly compared with other Santa Gertrudis GROUP BREEDPLAN EBVs. These EBVs can not be used to compare animals of another breed.

Estimated Breeding Values (EBVs)

An animal's breeding value is its genetic merit, half of which will be passed on to its progeny. While we will never know the exact breeding value, for performance traits it is possible to make good estimates. These are called Estimated Breeding Values (EBVs). The EBV is therefore the best estimate of an animal's genetic merit for that trait. EBVs are expressed as the difference between an individual animal's genetics and the genetic base to which the animal is compared.

Birth

- **Gestation Length:** The GL EBV (days) is based on AI records. Lower (negative) GL EBVs indicate shorter gestation length and generally easier calving.
- **Birth Weight:** The Birth Weight EBV (kg) is based on the measured birth weight of animals, adjusted for dam age. The lower the value the lighter the calf at birth and the lower the likelihood of a difficult birth occurring. This is particularly important when selecting sires for use over heifers.

Fertility

- **Scrotal Size:** The SS EBV (cm) is an indicator of male fertility in regards to semen quality and quantity. Scrotal circumference measurements are taken between 300 and 700 days and adjusted to 400 days of age. Higher (positive) EBVs indicate higher fertility. SS is also positively associated with female fertility.
- **Day to Calving:** The DTC EBV (days) is an indicator of female fertility based on the time between a cow's first exposure to a bull and

when she subsequently calved. Cows that calve late in the season or fail to calve are penalised. Lower (negative) EBVs are preferred indicating shorter days to calving for the sire's daughters.

Growth

- **Milk:** 200-Day Milk EBV (kg) is an estimate of an animal's milking ability. For sires, this EBV is indicative of their daughter's milking ability as it affects the 200-day weight of their calves.
- **200-Day Growth:** The 200-Day EBV (kg) is calculated from the weight of animals taken between 80 and 300 days of age. Values are adjusted to 200 days and for dam age. This EBV is the best single estimate of an animal's genetic merit for growth to early ages.
- **400-Day Weight:** The 400-Day Weight EBV (kg) is calculated from the weight of progeny taken between 301 and 500 days of age, adjusted to 400 days and for dam age. This EBV is the best single estimate of an animal's genetic merit for yearling weight.
- **600-Day Weight:** The 600-Day Weight EBV (kg) is calculated from the weight of progeny taken between 501 and 900 days of age, adjusted to 600 days and for dam age. This EBV is the best single estimate of an animal's genetic merit for growth beyond yearling age.
- **Mature Cow Weight:** The Mature Cow Weight EBV (kg) is an estimate of the genetic difference in cow weight at 5 years of age. Lower or more moderate EBVs are generally more favourable.

Carcase

- **Carcase Weight:** The Carcase Weight EBV (kg) estimates the genetic difference in carcase weight at a standard age of 650 days.
- **Eye Muscle Area:** The EMA EBV (cm²) estimates genetic differences in eye muscle area at the 12/13th rib site of a 300kg dressed carcase. More positive EBVs indicate better muscling.

- **Rib Fat:** The Rib Fat EBV (mm) estimates the genetic differences in fat depth at the 12/13th rib in a 300kg dressed carcass. More positive EBVs indicate more subcutaneous fat and earlier maturity.
- **Rump Fat:** The Rump Fat EBV (mm) estimates the genetic differences in fat depth at the P8 site of a 300kg dressed carcass. More positive EBVs indicate more subcutaneous fat and earlier maturity.
- **Retail Beef Yield Percent:** The RBY% EBV (%) represents total (boned out) meat yield as a percentage of a 300kg dressed carcass. A more positive EBV indicates higher percentage yield for the 300kg carcass size.
- **Intramuscular Fat Percent:** The IMF% EBV (%) is an estimate of the genetic difference in the percentage of intra-muscular fat at the 12/13th rib site in a 300kg carcass. Depending on market targets, larger more positive values are generally more favourable.

Accuracy

An accuracy value is presented with every EBV and gives an indication of the amount of information that has been used in the calculation of that EBV. The higher the accuracy, the lower the likelihood of change in the animal's EBV as more information is analysed for that animal or its relatives.

Accuracy Range	Interpretation
Less than 50%	The EBVs are preliminary. EBVs in this range will have been calculated based on very little information. These EBVs could change substantially as more direct performance information becomes available on the animal
50 - 74%	The EBVs are of medium accuracy. EBVs in this range will usually have been calculated based on the animal's own performance and some limited pedigree information.
75 – 90%	The EBVs are of medium-high accuracy. EBVs in this range will usually have been calculated based on the animal's own performance coupled with the performance for a small number of the animal's progeny.
90% and above	The EBVs are a high accuracy estimate of the animal's true breeding value. It is unlikely that EBVs will change considerably with addition of more progeny data.

Although the accuracy of an EBV should be considered, animals should be compared on EBVs regardless of accuracy. Where two animals have the same EBV however, the animal with the higher accuracy would normally be used more heavily than the bull with the lower accuracy because the results can be predicted with more confidence

Selection Indices

The Selection Index value for an animal is effectively an EBV of the animal's profitability for a defined commercial production system and market end-point. Ranking bulls on their Selection Index value sorts them based on their progeny's expected differences in profitability for the targeted production system.

As a guide to using Selection Indexes, it is recommended that producers complete the following steps:

- i. Identify the Selection Index of most relevance to your production system
- ii. Rank animals on the Selection Index
- iii. Consider the individual EBVs of importance
- iv. Consider other traits of importance that may not be accounted for in the selection index (eg. temperament, structural soundness)

There are currently two different selection indexes calculated for Santa Gertrudis association animals. Each Selection Index describes a specific production system and market scenario as described below:

Domestic Production Index - Estimates the genetic

differences between animals in net profitability per cow joined for an example self-replacing commercial herd (run in a temperate environment) producing steers for the domestic trade. This Index assumes that the steer progeny are pasture grown and finished and marketed at 500 kg live weight (280 kg HSCW and 12 mm P8 fat depth) at 16 months of age. Daughters are retained for breeding

Export Production Index - Estimates the genetic differences between animals in net profitability per cow joined for an example commercial herd (run in a sub-tropical environment) producing steers for the export trade. This Index assumes that the steer progeny are pasture grown and finished and are marketed at 620 kg live weight (340 kg HSCW and 15 mm P8 fat depth) at 28 months of age. Daughters are retained for breeding.

All selection indexes are reported as an EBV, in units of relative earning capacity (\$) for a given production/market scenario. They reflect the short term profit generated by a sire through the sale of his progeny.

Disclaimer:

The Santa GROUP BREEDPLAN Estimated Breeding Values contained in this Sale Catalogue were compiled by the Agricultural Business Research Institute (ABRI) from data supplied by the breeder.

Neither Santa Gertrudis Association nor the ABRI oversee or audit the collection of the data.

The Australian Poll Gene Marker test was initially developed by the Beef CRC and released to industry in 2010. The initial test was based on a single DNA marker and worked very well in some breeds, but not so well in others.

The test was further developed by the CSIRO, with funding assistance from Meat and Livestock Australia, and a greatly improved test was released in 2013. The improved Australian Poll Gene Marker test uses the same marker as the initial test but also incorporates information from nine other markers close by in the genome. The genotype information from all ten markers is combined to create a 'haplotype' to more accurately track the origin of alleles and associate them with being horned or polled. The additional marker information increases the proportion of animals for which the test returns an informative result, and also increases the accuracy of those results.

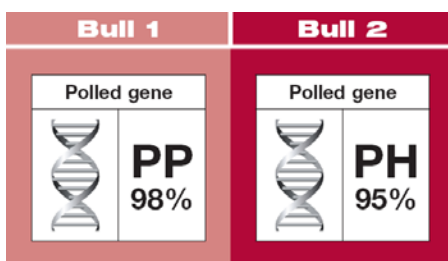

Breeders who are able to apply a level of selection pressure to their cow herd can also use the same philosophies that have been outlined for bulls. Retaining only polled or scurred females will increase the frequency of polled genes within the herd, while giving priority to polled females that have been identified by DNA test as being homozygous polled will maximise the rate of polled gene introgression into the herd.

Importantly, breeding for polledness should always be balanced with selection for other traits of economic and functional importance within the breeding objective. Simply selecting for polledness without any consideration of other important traits is not recommended as it may potentially compromise the genetics of animals for these other traits.

An example of the test result is displayed above right. The results will describe the percentage chance of the most likely genotype, with the possible genotypes being reported including homozygous polled (PP), heterozygous polled (Ph)

or homozygous horned (hh). The accuracy of the test result will be reported alongside the most likely genotype. This accuracy will range from 90% to 99%. For animals where the test cannot return an informative result (that is, the accuracy of the prediction is less than 90%) the result will be returned as ND (Not Determined).

For further assistance in understanding the genetics of polledness, or the use of the Australian Poll Gene Marker test, contact staff at Southern Beef Technology Services (SBTS) or Tropical Beef Technology Services (TBTS).

Looking after your new bull

We have put a lot into getting your purchase ready with breeding and management and now it is up to you to continue to prepare your considerable investment for the future.

The following are a few tips:

- At auction sales, remember that possession is yours after the fall of the hammer.
- We recommend that you insure your bull - it is a new asset to your property.
- Pen bulls on the truck from different vendors / properties separately.
- Handle him quietly at all times, no buzzers have been used on these bulls.
- Have some cattle in the yard for company to run him with for a week or so to get acquainted to your property. All will be strange to him as he has been taken from his mates and even the water and feed will be different as well as your environment.
- Check the health treatments he has had and that they are appropriate to your area and treat with anything additional you think he might need after he has settled in.
- At joining it is preferable not to mate young bulls multiply with older sires, as they will not allow the young bulls near the cows and they could get injured.
- Try and get him to his selected group of cows preferably in a group with other cattle or bring the group to him.
- Check him regularly, seeing he is walking well, no swelling of joints or in his sheath, if possible that he is serving and that not too many cows are returning to heat.
- If you suspect any problems occurring quick action may cure a problem before it escalates.
- Have a spare bull or bulls available to cover

any break downs, do not give the young bull increased numbers of females to cover other breakdowns within the herd. Also young heifers may be in heat for less time than cows and you will need more bulls to cover them.

- After the joining remove him and give him any health treatments such as for internal and external parasites and any vaccinations appropriate to your conditions.
- Give him every chance to grow out and develop after his first joining as your Santa bull will continue to grow and be cutting teeth, for at least a further twelve months.
- Annual pre joining vet examination will help with your next joining results.
- Bulls are a large investment for any breeding herd and they have a major effect on herd fertility. A little time and attention to detail to make sure they are fit, free from disease and actively working is well worthwhile and can deliver huge results to our agricultural businesses.

If you have any queries or problems please contact us as soon as you can so that we can assist you.

Breeding Objectives

Our breeding objective is to produce structurally correct moderate framed Polled Santas, balanced in fertility traits, weight traits, muscling and fat. Always mindful of maintaining an easy doing functionally efficient and fertile herd, with a broad genetic base to meet the current market needs of our clients and to improve the profit in their operations.

To achieve our objectives we employ the following strategies:

Fertility

- We don't pamper the stud cow herd; they are run on a commercial basis, in conjunction with cropping. This strategy indicates the cattle that will perform especially for fertility and gives clients confidence that the sires they purchase will perform in any climate.
- Semen and morphology test bulls and use as high a quality tested bull that meets our breeding objectives.
- Maintain soft fine haired cattle. These perform better in our climate and are more fertile.
- Select for cattle with above breed average fat. Fat is important for carcass coverage (MSA), doing ability leading into better fertility.
- Keep a balance between milk and fertility traits.
- Identify sires that have excessive birth weights.
- Select for cattle with tidier sheaths. This gives us much better fertility in both bulls and females also complying better with the MSA requirements.

Maturity/Meat Quality

- Select for moderate framed cattle with above breed average young growth.
- Select cattle that are able to perform well in a range of markets for clients.
- Our style of Santa Gertrudis cattle are able to target the vealer market, the feed lot and all the way through to the bullock trade.
- Select for quiet temperament for handling and meat quality issues.

Informed decisions

- All cattle are performance recorded for as many traits as we can manage, keeping in mind commercial considerations. E.g. we don't scrotal score all male calves as we castrate most of our horned and culls before weaning.
- Performance data is used in mating decisions to produce balanced progeny.

BENELKAY STUD

History:

In 1963 the Benelkay herd had its beginnings situated west of Walgett as a cross breeding operation, started by Andrew's parents Dick and Dianne Orman. The cow herd was based on Weebollabolla Shorthorn cows and Santa Gertrudis Bulls, mostly of Wave Hill, Gyranda, Ameroo, Kalinga, Pamoola, Marengo, Murrumbo and Yarrowonga bloodlines. In 1970 the Benelkay stud was registered with the SGB(A)A and became Stud number 810 . With the select purchases of stud cows and the existing commercial line of straight Santa Gertrudis cows, the stud had a good genetic base to form the early stud and grow it into what it is today.

Today the Benelkay Santa Gertrudis Stud is run on "Glenmore" and Tuppence", located 34km North West of Mullaley, in the Goolhi district, or 68km West of Gunnedah. "Glenmore" is a 1650 Ha property comprising of gently undulating to hilly country with a mixture of heavy black basalt, red clay loams and sandy soil types." Tuppence" is a 730 Ha property situated next to Glenmore, and was originally part of the historic Goolhi Station, that once covered most of the North Western side of Mullaley. Tuppence is the location of the new Benelkay Sale Complex that was built for our second annual sale. The stud has become our passion some say obsession, and something that we enjoy as a family with our two children Sam and Georgie helping and being involved when they can.

Stud Focus:

With a strong genetic base of 400 classified stud cows. Benelkay is well placed to breed cattle to suit the modern day commercial cattleman. With a strong emphasis on poll cattle that have the ability to enhance the carcase traits in the stud and commercial cattle industry. We have selected and used only poll sires for over thirty years giving us a large genetic poll base to draw from. This year's sale team will have 23 Homozygous (PP) bulls represented which gives the industry an opportunity to

be able to purchase sires to fast track their own herds towards poll genetics. These results will be on the supplementary sheet or ring us pre sale. The Benelkay stud is run on a commercial basis with no favouritism. With years of work going into the fertility, temperament and the need to breed cattle that are soft, easy doing and are saleable all year round we have found this style of cattle can compete with and better other breeds, but still retain the excellent attributes of the Santa Gertrudis Breed. We have found over time that moderate cows have the best fertility and we can move a little each way with size to suit the needs of most beef markets. Our entire herd is performance recorded, all stud and commercial cows with Santa Gertrudis Group Breedplan. We find Breedplan, a useful tool in our herd selection, as well as using visual assessment. Both tools enable us to make fast gains in the desired traits we believe our herd needs to be achieving.

Sires in the past years making an impact on our stud's direction, have been, Sanford Vale Juggler (P). Wave Hill F73 (P), Wave Hill Napperby (P), Wave Hill Dapto (PS) and Bullamakinka Dreamtime (P). Also SuJo First Class (P) who has proved to be a wonderful sire, taking the stud forward in the direction, we believe the industry needed to be heading. His progeny have had a huge impact within the stud and I think we will benefit from his bloodlines for many years to come.

Every year we try to bring new genetics into the sale for our clients. This year we are proud to introduce Burrumurra Boss (P), and Dangarfield Young Gun (P) (ET) (AI). Both bulls are fresh genetics to our herd and have contributed to the sale team very positively in their first year of use. We feel they will both continue to contribute to the genetic growth of our herd.

Introducing...

Stud Ultra Finish

Premium Finisher Pellet for Stud Cattle

High energy, high protein (16%) - high quality pellet designed specifically for Stud Cattle.

Formulated for optimal growth rates, muscle definition and shiny coat.

Very safe to feed – reduces issues with acidosis, laminitis and bloat.

Very high, balanced vitamin and mineral profile – designed with fertility in mind.

An ideal product to be fed in with green pasture such as oats to minimise scouring, while providing the finish and glossy coat on stock.

Also available:

- Stockfeed
- Dry Lick Supplements
- Protein Meals and Concentrates
- Bulk, bulk bag or bagged

Nutramix is a proud supporter of

BURRAMURRA BOSS 152 (P)

Boss was purchased as a led bull at the 2016 Santa Central Sale, weighing 891kgs at 22months with a DWG of 1.30kg, Scrotal of 40cm and an EMA of 122. After watching him win his class at the Ekka we thought we would purchase him for his out cross genetics, growth, tropical dark skin type and very quiet temperament. Boss has grown into an eye appealing sire, great thickness and good depth with plenty of scale. He has thrown progeny with strong breed character and we feel he will be used in the breeding program with strong results into the future. We are very pleased with both his male and female progeny.

Sire of lots 3,4,9,11,14,15,19,22,29,31,34,35,37

DANGARFIELD YOUNG GUN Y264 (PS)

Young Gun was purchased at the 2016 Dangarfield on property bull sale as a 21 month old bull, weighing 800kg's with a DWG of 1.20kgs, 41cm Scrotal and an EMA of 121cm. Young Gun is a very thick set bull carrying good length and width throughout his carcass. His fantastically naturally quiet temperament that he has passed on to his progeny has been a pleasing aspect. His sire Dangerfield Valliant (P) was purchased by Yugilbar for \$26,000, his grand sire is Dangarfield Quaterback (P) one of the most influential sires in the Dangarfield herd and his dam has been used as an ET cow producing eleven calves. Young Guns is producing progeny with that extra bit of doing ability, which we would expect by his pedigree.

Sire of lots 2,5

BULLAMAKINKA H82 (PS)

H82(PS) was one of the standout bulls sold in the Bullamakinka sale draft in 2013. He impressed us with his sire appeal, high bos-indicus content, fine dark tropical skin, poll genetics, frame and softness. H82(PS) is stamping his quality and style on his progeny. Twenty eight sons have sold at auction over three sales to average \$7,500. In 2016 Benelkay Kalahari sold to Andrew and Angela Doering "Spring Creek" Santa Gertrudis Stud for \$18,000 along with Benelkay Kruzer (P) selling for \$17,000 to Nugget Carter "Birrimba" Santa Gertrudis Stud. In 2017 Benelkay Lonewolf (P) topped the sale at \$12,000 selling to Ian and Kerry Walker "Strathmore" Santa Gertrudis Stud Blackall QLD.

Sire of lots 12,21,27,30,38

WAVE HILL DAPTO D564 (P)

Dapto was purchased late in the catalogue at the 2010 Santa Central Sale for \$23,000. Dapto weighed 885kgs at 26 months, EMA of 124, and a scrotal of 41cms. Over all a very correct bull with plenty of growth, a perfect sheath, and a tropical skin type, with safe genetics to back him up. Dapto (P) has proven to be a more maternal sire producing many outstanding females, and has proven to be an exceptional worker in the paddock. His females are outstandingly fertile, and develop into good solid breeders. They carry a very high tropical content, early sexual maturity and have crossed very well with the majority of our blood lines. Twenty sons have sold at auction for an average of \$5,100 with a top of \$8,500 for Benelkay King K038 (P) in 2016 selling to James Wippel "Romean".

Sire of lots 39,40

BENELKAY GYRAL G152 (P)

Gyral (P) was retained for use in the stud to keep the Bullamakinka Dreamtime (P) bloodline developing throughout the cow herd as we believed he would breed exceptional females. He is a later maturing style of bull and has developed into a massive mature bull, with a similar style to his sire Dreamtime but bigger. As an added bonus he is from a strong female line, with his grand dam breeding eleven calves and one other sire we have successfully used in Benelkay Lynx (P). We have kept two sons as Sire's in 2018. Benelkay Mohican M034 (P) and Benelkay Missouri M056 (PS). He is throwing very consistent cattle both male and females, with a lot of breed type, and style.

200D	400D	600D	Mat. Cow	Milk	SS	Carcass Wt	EMA	Rib	Rump	RBY	IMF (%)	Dam Index (\$)	Exp Index (\$)

Sire of lots 10,32

MACAIRE HALLMARK H037 (P)

Hallmark H37 (P), was purchased at the 2015 Santa Central Sale as a very young led bull. He was selected for his eye appeal, perfect quiet temperament, deep dark red skin type and he was an out cross from any breeding within our herd. He carries a lot of Big Sir bloodlines; these lines carry strong poll breeding and have bred well over the years for many studs.

He has developed into a quality sire, he is heavy boned, moderate framed with a mid maturity pattern, well muscled. He is throwing consistent quiet, dark skinned quality sons and daughters. He seems to be crossing well with the majority of our blood lines, and breeding above himself.

His first sons sold in 2017 and averaged \$9,000 with a top price of \$10,000 selling to G & G Farming. We have sold ten sons to average \$7,300

BULLAMAKINKA DREAMTIME D62 (P)

Dreamtime was purchased for the top price of \$20,000 at the 2009 Wandoan Sale. At 21 months he weighed 932 kgs, had an EMA of 132 cms, scrotal of 42 cms and was sired by Swan Hill Morley. He has grown into a massive mature sire weighing around 1300kgs in paddock condition. We purchased him as a sire, for his out cross genetics, his extreme growth and weight for age. He has crossed extremely well with the First Class (P) cows and his progeny are large framed, well muscled, quiet natured with plenty of breed character. Twenty nine sons have averaged \$7,517, with a top of \$26,000 in 2012 for Benelkay Futurama (P), selling to "Tookey Creek and Jarrah Park" Studs. Benelkay Genset (P) topped the 2013 sale at \$18,000 as well as Benelkay Grunt (P) for \$10,000, both going to Moreton and Frances Rolfe's, Hardigreen Park Stud.

COMMENTS:

Navada (PP) First of the Burrumurra Boss (P) sons to be offered. Only a very young bull but deserves his place this high in the catalogue. Masculine well balanced dark poll bull, strong constitution, perfect docile temperament. Carries exceptional length, depth with a thick top line and deep muscling down his hindquarters. Not over the top figures but strong positive numbers where it counts. Dam E83 (P), strong performing First Class cow, has had four bull calves. Handsome (PP) was kept as a sire before being sold for breeding, Jacques (P) was sold to Birrimba Santa Gertrudis Stud for \$8,000, then Maddox (P) sold last year to Gavin Kelley for \$ 4,000, now Navada.

COMMENTS:

Nandewar (PS) Very interesting Burrumurra Boss (P) son, a heifers calf carrying strong carcass attributes with good length. Outstanding doing ability that he has displayed since weaning. This bull could be used in a wide range of breeding objectives. Top 1% 200 day, Top 5% 400, 600 day Growth and Mature Cow EBVs. Top 10% EMA. Grand Dam had eight calves one sale bull selling to Buzz Pulver for \$5,000 and four females retained in the stud.

MULTIMIN[®]

Injection for Cattle

OPEN THE WINDOW OF PRODUCTIVITY AT DRY OFF AND BEFORE CALVING.

Deliver essential trace minerals quickly when they have the most impact.

MULTIMIN[®] is a multi-mineral injection designed to be used at critical times in the production cycle, including at dry off and before calving. The 60 days before calving is an important window of productivity because during this time, the trace minerals in Multimin can assist in the development and health of the calf and help cow health after calving.

- Contains selenium, copper, zinc and manganese, trace minerals that are essential for normal immune function and improving disease resistance.
- A healthier herd means a healthier bottom line.

Contact your local area sales manager today.

MULTIMIN is a registered trademark of Virbac (Australia) Pty Ltd.
