Welcome to the 2023 Greenup Eidsvold Station Sale Team

The sale will be on Thursday September 14, 2023, commencing at 12 pm at “Belvedere”, Eidsvold.

This 2023 team offers 140 Santa Gertrudis bulls, of which 125 are Classified ‘S’ bulls, 112 are poll/pollscur and 30 are homozygous poll

2023 marks 175 years since Eidsvold Station settlement in 1843, and the 66th Eidsvold Bull Sale. We are commemorating this milestone with a new sale complex at ‘Belvedere’, Eidsvold and invite you to join us.

As well as heralding another chapter in Australia’s oldest Santa Gertrudis Stud, Eidsvold Station, Stud 2, the Belvedere Sale Complex reflects our commitment to breeding Santa Gertrudis for the Australian Beef Industry and recognises the expanding demand for the breed’s versatility and desirability in a multitude of markets and environments.

The 2023 draft offers depth and consistency across our signature traits: temperament, fertility, muscling, explosive growth, easy-doing constitution, with desirable tropical attributes - underpinned by our strict standards.

There are standards and there are parameters. Standards like temperament, structure and fertility are non-negotiable. Once potential sires meet our standards, then we consider parameters for traits that are measurable, repeatable, and reliable.

Cattle breeding rewards patience and consistency, with permanent and cumulative gains if the breeding objectives are adhered to. This year’s breeding decisions will impact your herd for the next two years to two decades. Now is the time to review: What traits do we seek / wish to avoid? What are our standards? What parameters suit our herd, environment, and markets? What do we want less of? What do we need more of?

‘Intensive-extensive’ was how our operation was described recently. The bulls are bred in extensively managed herds in a range of environments and are monitored and measured at every stage. No special treatment is given to any cow, bull, or sire. Genuine pressure on the female herd, that does not include masking and compensation by management, realizes constitutional superiority and fertility.

Our rigorous drafting allows the cream to rise to the top. The 2023 sale team average EBVs are in the top 20% for most traits. Our bulls run in large cohorts, while being measured and compared until 400 days. From 400 days onwards, the draft of 700 bulls is whittled down to the 140 bulls presented for sale. The sale team has passed semen morphology and assessed by BULLCHECK accredited vet, Stacey Rae, Monto Vet. Our standards result in bull returns/breakdowns that are less than 1 bull breakdown per 200 bulls sold.

The sale will be livestreamed and interfaced with AuctionsPlus. We welcome pre-sale inspections. Full catalogues are available at www.greenup.com.au or contact us or our agents, Elders and GDL, for a hard copy.

For your peace of mind, the herds are JBAS 7, the bulls are cleared for ticks, and fully vaccinated, and free delivery is offered to major selling centres and on-property wherever feasible.

We look forward to seeing you at “Belvedere”.
Rick, Alice, Ruby, James & Rory

GREENUP GUARANTEE BULLS DONE RIGHT

Our objective is to produce reliable seedstock that have predictable performance and proven fertility.

A simple philosophy “to breed profitable cattle for self-replacing commercial herds, which perform in all environments and within all major markets” remains at the heart of Greenup Eidsvold Station values.

Greenup Eidsvold Station runs in excess of 6000 head of Santa Gertrudis cattle, in the Burnett region of Queensland.

Greenup Eidsvold Station supplies hundreds of bulls annually to the Northern Australian Beef Industry to repeat clientele, over 95%.

We stand behind our bulls and all bulls are backed with the Greenup Guarantee for fertility and temperament.

Greenup Eidsvold Station bulls and their progeny are thriving across the arid rangelands of northern Australia, from the Pilbara, to the Kimberley, the Gulf, outback Northern Territory and the far western reaches of Queensland.

The feedback we get about how the bulls handle the heat, the distances to water and the work, reaffirms that the tough environment in which the 1800 stud females are run - the native pasture, the steep hills and granite Ironbark country - enables selection for superior constitution.

Our herds are WA eligible and JBAS 7

Greenup Eidsvold Station Bulls are bred and prepared for a long & productive life.

Our business success hinges on our clients’ outcomes and their success, measured by:

1. Calves weaned and total kg produced per mated cow per year
2. Females re-breeding annually in arid, low-protein environments
3. Less costs by using fit, fertile bulls that walk far, work hard and last.
4. Turning off cattle earlier

5. Premium prices.
6. High weight gains and feed conversions
7. Carcase and eating quality traits
8. Improving c/kg by expanding market options

The outcome is functional, fertile herds that perform well in tough country, and provide the supply chain with rapid growth & ability to finish export or domestic cattle between 12 and 24 months of age.

KEEPING IT SIMPLE

The beef industry is demanding & requires reliable bulls that perform predictably.

The Greenup Eidsvold Station breeding program is underpinned by six decades of selection and the longest running objectively performance recorded herds.

Greenup Eidsvold Station are Breedplan herds.

We measure thousands of data records each year and use this data for ground-truthing subjective appraisals and to ensure we produce seedstock that is

demonstrably improving commercially relevant traits.

Our bulls are bred on the tough Ironbark forest country of the Great Dividing Range, under demanding, low-protein conditions. This environmental pressure ensures we continue to select for easy-doing cattle with exceptionally high constitution.

So whether you are a numbers person, or just want bulls that you can trust to do a job for you in any environment; you can be assured that they’ve qualified for the Greenup standard.

THE DIFFERENCE

Industry relevance lies at the heart of our breeding values.

We understand what’s important to the bottom line and we embed those priorities into our breeding objectives to produce low cost, high-return, self-replacing herds, that serve the whole supply chain for major domestic and export markets.

The bulls are raised to work straight-away, for longer so our clients benefit.

All bulls must pass our criteria for conformation, temperament semen morphology, scrotal size, growth and muscling, while retaining softness.

We take pride in the standards we set for preparation, fertility, and structure.

These standards result in bull returns/breakdowns that are well below 0.5% over the last decade, that is less than 1 bull breakdown per 200 bulls sold.

Not everything that can be counted counts. And not everything that counts can be counted.

Albert Einstein

Balanced Breeding

Greenup Eidsvold Station is one of largest data sets of objective performance records in Australia. We pride ourselves on this legacy, and provide data on traits that are objectively measured and most importantly - repeatable. Data must serve a commercial purpose and the outcomes must be reliable and predictable. We do not provide data on traits which are not repeatable and heavily prone to inconsistencies and vast swings (Eg semen morphology), environmental noise and the consequential inaccuracies and high standard deviations (Eg +/-9 days for DTC of 50% accuracy). We advise strongly for moderation when considering all traits and for breeders to be wary of selecting for unintended correlations. For example: Days to calving is possibly selecting for shorter gestation length and by consequence, smaller and lower thrift calves - a major cause of post partum mortality in northern beef herds. A balanced, consistent breeding program will always prevail over time.

Breedplan Explained - Estimated Breeding Values (EBVs)

An animal's breeding value is its genetic merit, half of which will be passed on to its progeny. While we will never know the exact breeding value, for performance traits it is possible to make good estimates. These are called Estimated Breeding Values (EBVs). The EBV is therefore the best estimate of an animal's genetic merit for that trait. EBVs are expressed as the difference between an individual animal's genetics and the genetic base to which the animal is compared.

Accuracy

An accuracy value is presented with every EBV and gives an indication of the amount of information that has been used in the calculation of that EBV. The higher the accuracy, the lower the likelihood of change in the animal's EBV as more information is analysed for that animal or its relatives.

Fertility

Scrotal Size EBV (cm) is an indicator of male fertility in regards to semen quality and quantity. Higher (positive) EBVs indicate higher fertility. SS is also positively associated with female fertility.

Growth

200-Day Growth EBV (kg) is calculated from the weight of animals taken between 80 and 300 days of age. Values are adjusted to 200 days and for dam age. This EBV is the best single estimate of an animal's

genetic merit for growth to early ages.

400-Day Weight EBV (kg) is calculated from the weight of progeny taken between 301 and 500 days of age, adjusted to 400 days and for dam age. This EBV is the best single estimate of an animal's genetic merit for yearling weight.

600-Day Weight EBV (kg) is calculated from the weight of progeny taken between 501 and 900 days of age, adjusted to 600 days and for dam age. This EBV is the best single estimate of an animal's genetic merit for growth beyond yearling age.

Carcase

Eye Muscle Area (EMA) EBV (cm²) estimates genetic differences in eye muscle area at the 12/13th rib site of a 300kg dressed carcass. More positive EBVs indicate better muscling on animals.

Rib Fat EBV (mm) estimates the genetic differences in fat depth at the 12/13th rib in a 300kg dressed carcass. More positive EBVs indicate more subcutaneous fat and earlier maturity.

Rump Fat (p8) EBV (mm) estimates the genetic differences in fat depth at the P8 site of a 300kg dressed carcass. More positive EBVs indicate more subcutaneous fat and earlier maturity.

Intra-Muscular Fat (IMF) % is an estimate of the genetic difference in the percentage of intramuscular fat at the 12/13th rib site in a 300kg carcass. Depending on target markets, more positive EBVs indicate higher IMF%.

Retail Beef Yield represents the total meat yield (boned out) as a percentage of a 300kg carcass. More positive EBVs indicate higher percentage yield.

Selection Indices

Selection indices can and possibly should be developed for each individual enterprise, however for convenience a Breed Society Index has been compiled based on common breeding objectives and some assumptions of breeding criteria. However not all operations are the same and will NOT want to place the same emphasis on each criteria, therefore these breeder should not use the Society Indexes but instead construct their own using Breed Object. We have shown the current weightings of the Indexes on the following page.

Breedplan figures cannot be compared between breeds

Only Santa Gertrudis GROUP BREEDPLAN EBVs with Accuracy (Acc) can be validly compared between herds.

Breed Average for 2021 born animals									\$ Index Value

Domestic Production Index

Estimates the genetic differences between animals in net profitability per cow joined for an example self-replacing commercial herd (run in a temperate environment) producing steers for the domestic trade. This Index assumes that the steer progeny are pasture grown and finished and marketed at 500 kg live weight (280 kg HSCW and 12 mm P8 fat depth) at 16 months of age. Daughters are retained for breeding.

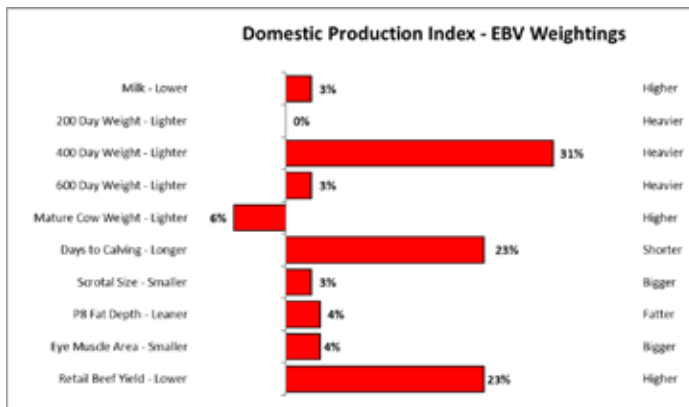

In summary: Self-replacing commercial herd targeting the domestic trade.

Temperate environment.

Heifers are retained so maternal traits are important.

Steer progeny are pasture grown and finished.

Steers target 500 kg live weight (280 kg HSCW & 12 mm P8 fat depth) at 16 months of age.

Export Production Index

Estimates the genetic differences between animals in net profitability per cow joined for an example commercial herd (run in a sub-tropical environment) producing steers for the export trade. This Index assumes that the steer progeny are pasture grown and finished and are marketed at 620 kg live weight (340 kg HSCW and 15 mm P8 fat depth) at 28 months of age. Daughters are retained for breeding.

In summary: Self-replacing commercial herd targeting the export trade.

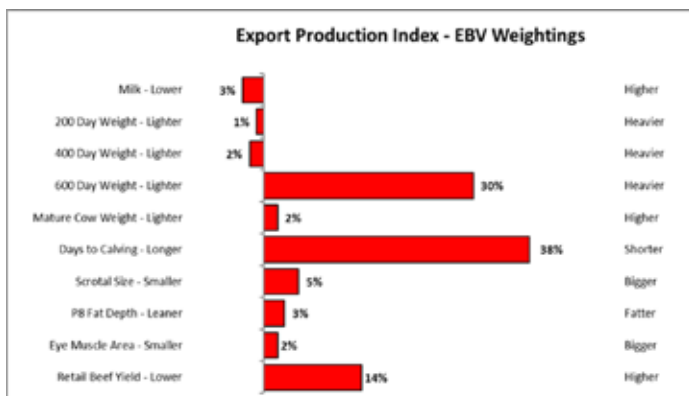

Sub-tropical environment.

Heifers are retained so maternal traits are important.

Steer progeny are pasture grown and finished.

Steers target 620 kg live weight (340 kg HSCW & 15 mm P8 fat depth) at 28 months of age.

Note that the extreme weighting to DTC can result in animals with low 600 days EBVs can still rank high on this index.

Tissue Sampling Unit (TSU)

Allflex® Tissue Sampling Units provide a simple but effective means for DNA testing livestock. Collect a clean, uncontaminated sample in seconds with a single squeeze motion, TSU's are easy to use and yield excellent lab results.

TSU's can be paired with a matching NLIS and visual management tag, creating a simple link between the genetics of an animal and its Identification.

Greenup Fitzgerald F144 (PS)

Classification: S

Pollscur

Soc ID: 291188

Since 2012 Fitzgerald has dominated our sales, with too many clients and studs that have benefitted from his legacy to mention. We have kept a number of sons for stud use. His daughters perform well and provide a strong base for outside sires to blend with. Fitzgerald naturally sired 291 calves. Fitzgerald offers growth with easy doing ability and he handles our tough forest country like it's scrub country. Fitzgerald's EBVs place him in the Top 1% for growth and scrotal size and Top 5% for Eye Muscle Area (EMA). He provides a ideal combination of the attributes of fertility, growth and most of all, constitution - this package is wrapped up with an incredibly docile temperament.

Talisman is a younger, pollscur bull with a quiet nature. He is a smooth, dark bull, with a deep hindquarter and clean underline. EBVs tell the potential of this young sire with his growth traits, eye muscle area and domestic index ranking in the top 5%, and scrotal size EBV in top 1%. This is coupled with fat and IMF scan ranked in top 20%, resulting in a top 10% Export Index. A complete all-rounder.

Peta P523 (P) has had three calves in three years. ICP: 349 days

ES K475 (P) was in the multiple herd.

Greenup Aethereal A141
 Rosevale Brunilla T132

Aethereal H139 (P) calved as a two year old and had nine calves in nine years. ICP: 396 days

Aethereal A141 is the great grandam of Lot 18. She had ten calves in ten years - (quite a feat in our light forest country) and left her mark in her sons and daughters. Her first calf, Gr Donga D148 sold to O. Maller, her second son, Greenup Gustav G108 (P) to the Riley Stud for \$13,000 in 2012. A third, Gr K34 (P) sold to Alcoota Station, Alice Springs. ICP: 369 days

The Lancelot legacy shines through in this stellar young sire. Tinker is a trait leader for the Santa breed for 200 and 400 day growth and domestic index, ranking in the top 1% for his explosive growth and ranks top 5% for 600 days. This meat machine also ranks top 10% for scrotal size and eye muscle area and export index. Phenotypically this bull is fleshy, quiet, easy-doing and has tropical looseness.

SALE INFORMATION

Auctions Plus

Online bidding is available only to registered users. Registration is free - visit www.auctionsplus.com.au to register. Please register at least 48 hours prior to the sale. Microsoft Silverlight is required to connect to AuctionsPlus sales; first time users are advised to visit the Downloads section of the AuctionsPlus website to ensure Silverlight is installed. Demonstration Auctions may be viewed in order for new users to become familiar with the system. Contact us or our agents to discuss how to make your AuctionsPlus bidding fast and effective.

Breeding Soundness: All bulls have passed a breeding soundness examination by veterinarian Stacey Rae, Monto Veterinary Services.

Semen morphology: All bulls have passed a semen morphology test

Health All bulls have been vaccinated with PestiGuard, 7 in 1, Vibrio, 3-day and 3-Germ blood for tick fever. Annual booster shots recommended next July.

Ticks: All Sale cattle have been pre-treated for ticks and are ready for tick-free country.

Buyers Inspections: Cattle may be inspected any time prior to the sale by arrangement with the vendor or selling agents. All sale lots will be on display at sale venues on morning of sale from 7.00 am.

Supplementary Sheets: Supplementary sheets will be on our website: www.greenup.com.au and also available at the sales with semen morphology results, scrotal sizes, raw weights, daily weight gains and scan data for eye muscle area, rib fat and rump fat.

Brands

Symbol Brands:

All Greenup cattle and Quarter Horses are branded with Wings over Nought.

Eidsvold Station cattle are branded with Half Circle J

Number Brands: Greenup Eidsvold Station bulls are branded with even numbers and heifers with odd numbers.

PRE-SALE INSPECTIONS

Prior to sale day, all bulls are depastured on oats at 'Belvedere' and can be inspected anytime.

Belvedere is situated on the Kerwee-Mt Perry Road, 10 minutes north of Eidsvold township.

To arrange inspection, contact Rick on 4164 4260 or his mobile 0427 644 260.

DIRECTIONS TO EIDSVOLD SALEYARDS

Eidsvold Saleyards are on the Southern side of town just off the Burnett Highway. Take Hollywell Road at the BP Petrol Station.

Guarantee

Our bulls are guaranteed as breeders at time of purchase, however we accept no responsibility in the following circumstances:

- Injury or disease that occurs to animal after the sale;
- Gross negligence or willful misconduct on the part of the purchaser;

In the event of an animal failing to breed, we agree that;

- The animal may be replaced with an animal of comparable value;
- Credit shall be given in the sum of the full purchase price, less salvage value;
- The vendor shall refund the money paid for the bulls.

These options shall be at the Vendors' election and the Vendor shall not be liable for any direct or indirect loss (including consequential loss) whatsoever.

Insurance: Insurance representatives will be at the sales and if requested will arrange insurance on the fall of the hammer.

Outside Agents: The vendors will pay a 3% rebate to outside agents who introduce genuine "new" buyers in writing at least 24 hours prior to the sale and is paid on previous eligible introductions. Rebate will not apply to existing Greenup Eidsvold Station clients, if unsure, please check with us beforehand. Settlement by the outside agent on the purchaser's behalf must occur within fourteen days of the sale. Commission will not apply to stud sires transferred to members of the SGBAA.

Delivery: Delivery will be given and taken on the day of the sale. Cattle waiting for trucking will be held free of charge for one week. Every care will be taken, however no responsibility will be accepted.

Risk & Responsibility: Any person attending the sale do so at their own risk and the vendor assumes no liability, legal or otherwise, for any injury, accident, loss or damage to any person or property.

Terms & Conditions of Sale: All lots will be offered under the ALPA Livestock Terms and Conditions of Sale.

Disclaimer: The vendors and agents have produced this catalogue with every effort to ensure the accuracy of the information, however will not be responsible for any errors or omissions.
